

Press Announcement

GoldKey Product Launch

GoldKey Secure Communicator

At CES on January 6, 2015, GoldKey will be announcing the very first **Secure Communicator**, a completely independent cell phone built into a watch. The **Communicator** also has a built-in 5 megapixel camera and an HD video camera – not to mention a GPS, high quality speaker, microphone, Bluetooth, and a Wi-Fi Hotspot.

What is more, the **Secure Communicator** comes with GoldKey inside, making it a dual-factor authentication device featuring Secure Email, Encrypted Cloud storage, and fully supporting Gold Pay.

This product is no toy. With a battery lasting all day, a serious user can shed the conventional cell phone by moving a SIM card to the **Communicator** and leaving the old phone behind.

The **Secure Communicator** is a fully functional Android™ device capable of downloading applications. The dual core processor is fast and reliable.

The **GoldKey Secure Communicator** has already won two important awards and is under consideration for others. It will be featured at a large, 50' X 50' exhibit in the South Hall, booth number 20542. A special press conference will be held at CES on January 6th, 2015, in LVCC room S227-A at 11 am.
